

TREAT WITH A SALT WATER SOFTENER OR *Purify with a Tesla Clean Water System?*

What's the Difference?

Water Softeners

TESLA Clean Water Systems

How it works	Flushes your water through a salt tank, removing healthy minerals and replacing them with twice as much salt. Does not remove contaminants.	Removes contaminants and purifies all of the water throughout your home. Uses no salt or chemicals.
What is removed	Calcium, magnesium, and a small amount of iron.	Removes carcinogens, chlorine, iron, contaminants, toxins, pathogens, and bacteria. Leaves in healthy minerals.
Health impact	Salt is horrible for our bodies and causes high blood pressure, hair and skin problems and it tastes terrible.	Healthier skin, hair and body. Crisp, clean and pure water without salt.
Ongoing costs	Costs of salt bags, wasted water, labor and electricity.	No salt to buy and fill. Self-cleaning system. Reduced soap, shampoo, and detergent use.
Impact on environment	Salt discharge is horrible for the environment, agriculture and your septic system and is beginning to be banned.	No harmful discharge into the environment. No more water bottles to buy and end up in landfills.
Home, pets & garden	Salt is bad for your pets, lawn, and plants. It is also corrosive to pipes and plumbing.	Healthy for your pets, lawn, and plants. Cleaner home, laundry and dishes.
